

LED panels for communication

The smooth running of a University requires rapid and efficient dissemination of information among its community, administrators, staff and students. An effective communication system should; therefore, be an integral part of a University. The old “Notice Board” still used in the UoP is an anachronism in a rapidly developing “modern” University with an urgent need to present and update an ever – increasing volume of data and information.

LED panel are used, extensively, in many parts of the world for interactive efficient, and effective transfer of information within a working community. Unfortunately; however only a handful of faculties in the UoP are known to use LED panels for communication. The installation of such panels would, undoubtedly prove beneficial to the community as well as the institution.

The AAUP, with the support of its members at home and abroad, would like to install LED panels at strategic points on the UoP campus (at least two monitors for each Faculty). The estimated cost of the proposed project is Rs.700,000.00.
