About the project

The INNOTAL project (Integrating Talent Development into Innovation Ecosystems in Higher Education) is implemented in the framework of the Erasmus+ Programme, Action - Capacity Building in Higher Education. The duration of the project is 36 months, starting in mid-October 2017 and ending in mid-October 2020.

The project partnership involves 5 EU partners (4 of which are Universities) from Bulgaria, Greece, Finland and the UK, 4 Universities from India, 2 Universities from the Philippines, 2 Universities from Nepal and 2 Universities from Sri Lanka.

Project objectives

The INNOTAL project aims at building the capacity of universities in the Philippines, Nepal, Sri Lanka and India to embed graduates’ employability in their core activities and to facilitate the development of student talent through co-curricular and extra-curricular innovation activities involving key stakeholders, with a view to contributing to youth employment, inclusive growth and sustainable development.

The project has the following specific objectives:

- To support the uptake and mainstreaming of entrepreneurship education and innovation training in PC universities and to promote the integration of talent development into research and innovation activities in collaboration with external stakeholders (enterprises, non-profits, public sector)
- To create sustainable institutional structures and ICT tools enabling student co-creation in research and innovation and stakeholder co-creation in talent development
- To build Partner Country universities’ capacities for delivering innovation and entrepreneurship training in view of building students’ employability skills

Capacity building intervention

The capacity building intervention has three key dimensions:

- enabling an institutional culture of strategic planning and change in the direction of improving the relevance of education
- launching Talent Co-Creation Labs in the participating universities from the Philippines, Nepal, Sri Lanka and India, which would support co-curricular and extracurricular live projects focused on student and stakeholder co-creation in innovation and engaging students with the world of work and the local communities
- developing tools and teaching resources to support staff and faculty implementing the new tasks

All dimensions seek to re-design students’ learning experience, introduce a challenge-driven learning model, improve graduates’ employability skills, strengthen Partner Country universities’ interactions with business, and involve external stakeholders in student talent development.
